

**NOTE:** After installation of the Digital Lightning 1200 in the car, the electronic controller needs to be programmed with the correct software applicable for your car.

You can find the software on our website [www.modernum.se](http://www.modernum.se), at page "Extraljuskablage".

How to download the correct software to the USB flash drive:

1. Connect the USB flash drive to your computer. Make sure the flash drive is completely empty before you start downloading the software.
2. Go to Modernum's website, page "Extraljuskablage".
3. Click on "Hämta mjukvara för DL 1200" and a new window will open.
4. In the drop-down menu under "Hitta din fil", select car manufacturer, car model, model year, and light package.
5. Download the file to your computer (usually ends up in the folder "Downloads")
6. Open the zipped file. Then move or copy the "candy.txt"-file to the USB flash drive.

How to program the electronic controller:

1. Make sure the controller is powered, i.e. is connected to +12 or + 24V.
2. Remove the cover of the USB-port on the controller.
3. Connect the USB flash drive with the candy.txt-file to the controller.
4. The controller will now be automatically programmed. When the yellow LED on the controller is off (takes about 5 seconds), everything is finished and the USB flash drive can be removed.
5. Replace the cover on the USB-port on the controller, to protect it from dirt.
6. The installation is now complete – please make sure your auxiliary lights turns on and off when you use the high beam-switch.
